

Finishing farms daily checklist

Every day, our team members make sure that pigs on finishing farms have proper care in comfortable barns.

- ✓ Walk through every barn and pen to check for injury or sickness and provide additional care if needed
- ✓ Check the feeders to make sure there is plenty of clean feed at all times
- ✓ Ensure that clean water is flowing at a rate that could fill a pint jar in 20 to 30 seconds and that waters are at a height easy for the pig to reach
- ✓ Monitor how much water the pigs are drinking, especially in the summer, when pigs should be drinking 4.5 gallons a day
- ✓ Evaluate the temperature and environment of the barns and raise or lower the curtains on the sides of the barns accordingly to provide shelter to the pigs
