

Birthing room cleaning checklist

After pigs are weaned and sows are moved back to breeding barns, and before a new group of pregnant sows are brought into the farrowing rooms, we do an inspection and sanitation.

- ✓ Evaluate any equipment that may need repaired before cleaning
- ✓ Wash the whole room from the ceiling to the floor to the walls and alleys, feeders, mats and all equipment.
- ✓ With a flashlight, thoroughly inspect the room
- ✓ Rewash any areas that were found to not be clean enough after the inspection
- ✓ Disinfect the whole room from ceiling to floor with sanitizer
- ✓ Remove any standing water with an air dryer
- ✓ Reevaluate room dryness and cleanliness before moving sows in the room to give birth
